## **NOTE**

This student work, written at Yale in 1971 for Alexander Goehr's seminar, is my first experiment with synthetic modes. I built a heptatonic scale having two augmented 2nds, keyboard symmetry, and a leading tone at the "wrong" end. Respelled here for convenience:

C C# D# E G G# A (C).

I decided to use as well, separately or in combination, its pentatonic complement,

A# B D F Gb.

Variations offered a likely compositional way to proceed, and Beethoven's 32 in C-Minor, which I was playing at the time, inspired a dare to make my theme short.
